Waypoint Advocates — Customer Workflow Review

Jeff Pursley | Working operations analysis | September–October 2026 | Sanitized public summary

Problem

Review how the team moves from calls and messages to clear intake, professional review, onboarding ownership and customer follow-through. Avoid assuming communication activity equals sales or service outcomes.

Scope and contribution

Reviewed representative call patterns, analytics, training material and CRM workflows. Consolidated front-line training references and drafted a structured, conversational call playbook with urgency, escalation and next-step controls.

Design approach

Start with the caller narrative; check urgency and deadlines; capture minimum required context; route to the correct professional or business workflow; confirm accountable next action and follow-up.

Treat the communication platform as the contact record, and the CRM as the business-stage system where applicable; validate the actual workflow and permissions before introducing duplicate logging.

Status and confidentiality

The public case reflects analysis and working recommendations, not verified commercial uplift, final business approval, production integration, or independent professional case advice. Confidential client/student names, pricing, individual interactions and internal documents are excluded.
